

Job Description:

Senior Systems Engineer

Location:

St. Louis is preferred, but we will accept applicants in other states.

Responsibilities:

The Senior Network/Systems Engineer will be responsible for the planning, design and construction oversight of all network systems ("back-end" hardware, software, security and server infrastructure) and technology solutions for all IT projects. This individual will lead various planning and design assignments including development of alternative system architecture, cost benefit analysis, development of basic infrastructure requirements including fiber, copper, racks, grounding, and equipment specifications, development of Request for Proposals, on-site construction oversight, testing and start-up. Must have strong experience integrating the design of technology solution with general building and construction projects.

Systems which may be required in the design process include:

- CCTV
- Access Control – Dynamic Signage
- Communication networks
- SCADA
- Public Address
- Wireless
- Radio Systems
- Fire Alarm
- Shared Infrastructure and others as required by the project

This job does not include physical installation or start-up of the network. It is focused on planning, design and engineering services. Writing specifications as well as oversight of technology construction projects is also part of this job.

Experience in the Aviation or Transportation industry preferred. The job requires travel both domestic and possibly overseas.

Preference for candidates who live in St. Louis area or willing to re-locate to the area, however, not a requirement for the position.

This person will also be expected to lead/mentor other senior engineers in network design and be willing to learn additional skills associated with the firm's service offerings.

Education:

Bachelor's Degree or equivalent

Technical Skills for Network Engineer:

1. Certifications: CCNA or CCDA, or RCDD
2. Education: Bachelor's Degree in Computer Science, Information Technology, Electrical Engineering or similar degree or equivalent experience.
3. Systems: Windows, Cisco Systems, UNIX, Linux
4. Networking: Switches, Routers, Hubs, Servers, Cables, Firewalls, LAN, WAN, TCP/IP, DNS, UDP, VoIP, QoS, EIGRP, BGP, OSPF, NHRP, ATM, PPP, MPLS
